Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zakarian et al (5,888,946) in combination with Smalheer et al.

Zakarian et al [Zakarian] disclose tractor hydraulic fluid compositions which are multi-application lubricants that are used in transmissions, differentials, final-drive planetary gears, wet-brakes and hydraulic systems of off-highway mobile equipment. The compositions comprise a first mineral oil having a kinematic viscosity at 100°C of at least about 4.0 centistokes and a viscosity index of 129 and a second mineral oil having a kinematic viscosity at 100°C of at least about 7.0 centistokes and a viscosity index of 144. The viscosity indices of the base oils are much higher than those commonly used in the industry. The "high viscosity index" base oils of Zakarian are also referred to as UCBO or "Unconventional Base Oils". See column 2, lines 1-38. Applicants teach in the specification on page 6, lines 5-25, that such high viscosity index UCBO base oils are suitable for use in the invention. The examiner is of the position that the base oils of Zakarian clearly meet the lubricant basestock limitation of the claims. Zakarian allows for the addition of polymers such as polymethacrylate polymers to the fluid composition and Zakarian allows for the addition of a performance additive package of conventional lubricant additives to the fluid composition. See column 3, lines 36-45. Such additives include

anti-wear agents and antioxidants. Although a sulfurized olefin, a salt derived from ammonia or an amine and a phosphorus acid ester is not specifically set forth, these are conventional lubricant additives as evidenced by Smalheer et al. The examiner is of the position that the gear or transmission fluid composition of the claims is clearly taught by Zakarian in combination with Smalheer et al.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
